## PRESENTACIÓN

Nun momento no que as ciencias, a tecnoloxía e, en xeral, o coñecemento do mundo avanzan a unha velocidade vertixinosa, maniféstase dunha maneira máis acuciante ca nunca a necesidade de precisión na denominación dos conceptos e dos obxectos nas distintas linguas do mundo. Isto explica en gran medida o desenvolvemento que están a ter neste momento os estudos de terminoloxía, e particularmente da terminoloxía sistemática.

O galego, para ser un vehículo de comunicación normal, apto para a expresión de tódolos aspectos da ciencia e da técnica, necesita estar en posesión dos recursos terminolóxicos suficientes para asegura-la comunicación dunha maneira eficaz e precisa, e esta terminoloxía debe ser propia, atendendo á realidade e ó xenio da lingua. A posesión dunha terminoloxía propia é un instrumento indispensable nunha política de normalización lingüística que trate de amplia-los espacios dunha lingua historicamente minorizada como a galega. Esta é unha das razóns polas que saudamos con especial satisfacción a aparición deste traballo, realizado baixo a supervisión de TERMIGAL, que se ocupa da terminoloxía dun sector tan importante para a nosa economía como é o dos "organismos acuáticos".

En Galicia a pesca e o marisqueo son actividades que ocupan un lugar moi relevante tanto desde o punto de vista social coma desde o punto de vista económico. Hoxe estas actividades están cada vez más regulamentadas tanto pola lexislación nacional coma polos convenios internacionais, circunstancia que pon de manifesto dunha maneira particular a necesidade da precisión terminolóxica. Estamos seguros de que este *Vocabulario multilingüe de organismos acuáticos*, no que se recollen, ó lado dos termos galegos, as súas correspondencias en inglés, francés, castelán e portugués, será un instrumento realmente útil para aumenta-la precisión e facilita-la comunicación entre as distintas linguas nas relacións referidas a este sector.

## INTRODUCCIÓN

A orixe desta publicación é dupla. Responde, primeiramente, á dispersión da información relativa ós nomes galegos dos organismos acuáticos e, segundo, á necesidade de moitos profesionais de teren un texto de referencia práctico e de fácil acceso, a onde recorren nas súas traduccións ou consultas idiomáticas.

Preténdese coa presente obra facer unha contribución á normalización lingüística no eido das ciencias do mar; normalización necesaria non soamente no campo da estatística (registro de capturas, desembarcos e comercialización), senón tamén nos intercambios comerciais de carácter internacional. A finalidade é facer unha proposta para a oficialización dos nomes en galego neste ámbito, de xeito que poidan unificarse lexislación, estatísticas e referencias cruzadas, o que só é posible acadar no caso dunha normalización.

Só de peixes hai no mundo máis de 18.000 especies. Tivemos que facer, pois, unha escolla para acada-las 2.131 especies de organismos acuáticos incluídas nesta nomenclatura. Os criterios seguidos para facérmo-la elección foron os xeográficos e os de interese comercial.

En primeiro lugar recóllense «in extenso» os organismos que foron detectados, descritos ou simplemente citados nas costas e cursos de auga de Galicia, e abriuse a escolla a aquelas rexións marítimas onde as nosas unidades pesqueiras ou de transformación desenvolven a súa actividade. Estendemos tamén a selección a outras áreas xeográficas ou caladoiros (nomeadamente fondos oceánicos mariños) onde as potencialidades de explotación son agora más posibles que reais.

Para aqueles organismos que están no primeiro caso (Galicia), selecciónase de entre os nomes comúns aquel máis difundido no seu uso lexislativo ou estatístico e achégase igualmente algúun outro sinónimo cando o seu uso é tamén frecuente. No caso de caladoiros ou zonas habituais de traballo dos nosos barcos (Terranova, Sudáfrica, Namibia, Mozambique, Svarlbard, Gran Sole, ...), empréganse os nomes utilizados polos profesionais nos seus rexistros.

Cando se trata de recursos pouco coñecidos na nosa cultura, ou de nomes xenéricos que abranguen diferentes organismos, é cando se realiza o exercicio de Adán, de darlles nome ós seres que van saíndo ó paso. Este é un exercicio necesario para poder chama-las cousas polo seu nome, pero que presenta moitos riscos e que deixa, por suposto, moita oportunidade para a discrepancia, circunstancia da que non podemos senón alegrarnos, sempre que sexa a orixe de novas iniciativas neste campo.

Dentro de cada clase CEIUAPA e cada taxon (vid. infra), a base de ordenación é a orde alfabética do nome científico. Cando se considera necesario inclúense sinónimos, particularmente útiles ó consultar informes ou referencias non moi recentes onde se recolle o seu uso.

Para os nomes correspondentes en español, francés e inglés úsase a nomenclatura oficial da FAO (Organización das Nacións Unidas para a Agricultura e a Alimentación), e para os nomes portugueses séguese, agás no caso das aves, a «Nomenclatura Portuguesa de Organismos Aquáticos», da autoría do Dr. G. Sanches, publicada polo Instituto Nacional de Investigação das Pescas de Lisboa, no ano 1989.

Para os que non estean familiarizados co nome científico dos organismos, cómpre indicar que este se compón de varias partes: o nome do xénero (escrito sempre coa primeira letra en maiúscula), o nome da especie correspondente, o nome do naturalista ou biólogo/a que o nomeou, e o ano

de tal evento. A inclusión do nome do naturalista e do ano nunha paréntese, indica que nun principio a especie foi adscrita a un xénero distinto ó que actualmente pertence. Cando un xénero se subdivide en subxéneros, o nome deste pode incluírse nunha paréntese entre o xénero e a especie<sup>1</sup>.

Así, no caso de: *Pseudotolithus (Hostia) moorii* (Günther, 1865), trátase do xénero «*Pseudotolithus*», subxénero «*Hostia*», especie «*moorii*», descrita por Günther no ano 1865, pero nun xénero diferente a *Pseudotolithus*.

Como marco onde encadrar e ordena-los organismos que se refiren, utilízase a “Clasificación estatística internacional uniforme dos animais e plantas acuáticas (CEIUAPA)” e as “Áreas FAO de pesca” para fins estatísticos, que se reproducen no texto. Dentro de cada clase CEIUAPA as distintas especies agrúpanse segundo criterios sistemáticos, indicándose en cada clase o nivel taxonómico empregado. A reunión dos distintos *filia* en grandes grupos (reinos) faise seguindo os criterios de Mergulis L. e Schwartz K. (1985), e, ó final do libro, ofrécese unha panorámica completa da sistemática de cada grupo, desde o nivel de Filum ó de Familia<sup>2</sup>.

Ó final do vocabulario ofrécese índices alfabéticos de tódolos organismos agrupados polo seu nome científico, galego, español, francés, inglés e portugués. Nos índices, cada entrada vai seguida por tres conxuntos de números que permiten unha rápida busca da ficha que corresponde ó organismo en cuestión; o primeiro conxunto de números indica a clase CEIUAPA á que pertence, o segundo conxunto representa o taxon (polo xeral Familia), segundo a clasificación que se ofrece na entrada de cada un dos grupos das clases CEIUAPA, e o terceiro é o número de orde do organismo. As aves, que non están incluídas na clasificación CEIUAPA, outorgóuselle-lo código de clase 99.

Así, no exemplo anterior, *Pseudotolithus (Hostia) moorii* (Günther, 1865), o conxunto numérico é: 33-72-456, que quere dicir que pertence á clase CEIUAPA 33 (Escarapotes, congros, robalizas, etc); taxon nº 72 (como

<sup>1</sup> As especies botánicas noméanse de xeito lixeiramente diferente, por exemplo non se indica o ano no que se describiu a especie, e o nome do descriptor indícase con siglas ou códigos.

<sup>2</sup> No caso da clase CEIUAPA 94, Plantas acuáticas diversas, as plantas reúnense en dous grupos: plantas distribuídas no litoral (código 27) e plantas ligadas a medios de auga doce, ríos, regueiros, .. (código 05).

podemos ver no inicio desta clase, na nomenclatura este número correspón dese coa Familia Sciaenidae); e dentro de tódolos peixes da clase 33 ten o número de orde 456.

Esperamos, de corazón, que esta nomenclatura poida ser de utilidade para todos aqueles que se interesan pola bioloxía dos organismos acuáticos en particular, e para aqueloutros que se interesan polo nome das cousas en xeral.
